Kristen Bell Travels to the 4th Dimension and Beyond Hollywood Star set to return as an animated hexagon

Austin, TX— February 15, 2011

Kristen Bell will return as HEX in the animated sequel "FLATLAND 2: Sphereland".

Ms. Bell plays Hex, a hexagon living in two-dimensional Flatland, who is summoned to help solve a mathematical mystery on the eve of Flatland's first mission into their "outer-space."

The story presents intriguing puzzles that challenge our understanding of mathematics, physics, and the shape of the universe. Full of action, humor and educational lessons, "Sphereland" will delight and educate audiences of all ages.

Kristen's film credits include: "You Again," "Burlesque," "When in Rome," "Couples Retreat," "Forgetting Sarah Marshall," "Pulse," "Serious Moonlight" and David Mamet's "Spartan." She has also appeared on many television hit series including "Veronica Mars," "Deadwood," "Heroes" and "Party Down."

"I am thrilled to direct Kristen in her return to the role of Hex. While writing the script, I always heard her voice portraying the curious and brilliant Hex," said writer/director Dano Johnson.

Over one million students and teachers worldwide enjoyed Kristen's performance as Hex in the first Flatland film. The sequel is based on Edwin A. Abbott's classic novel Flatland: A Romance of Many Dimensions and Dionys Burger's sequel Sphereland.

The project is currently in production in Austin, TX and will be completed next year. The program is part of an educational DVD to be used by teachers in the classroom.
